

## BEGINNER FULL BODY ADAPTATION PROTOCOL

Foundation motor-pattern acquisition, neuromuscular adaptation & machine safety

|                 |  |                     |  |                            |  |                                                |
|-----------------|--|---------------------|--|----------------------------|--|------------------------------------------------|
| Level: Beginner |  | Duration: 4-6 Weeks |  | Frequency: 2-3 Days / Week |  | Target: Anatomical Adaptation & Motor Learning |
|-----------------|--|---------------------|--|----------------------------|--|------------------------------------------------|

### 1. WARM-UP & JOINT MOBILITY PROTOCOL (8-10 MIN)

- " Cardiovascular Ramp-up: 5 min Treadmill or Rower at RPE 4-5 / 10
- " Dynamic Mobility: Cat-Cow (10 reps), World's Greatest Stretch (5/side), Glute Bridges (15 reps)

### 2. STRUCTURED EXERCISE SESSIONS

| SESSION A   Compound Whole-Body Kinetics & Core Stabilization |
|---------------------------------------------------------------|
| EXERCISE                                                      |
| Leg Press 45 deg                                              |
| Chest Press Machine                                           |
| Lat Pulldown (Pronated)                                       |
| Seated Leg Curl                                               |
| Dumbbell Lateral Raise                                        |
| Abdominal Crunch Machine                                      |

### 3. COACHING NOTES & PROGRESSION MODEL

- " Double Progression Rule: Increase weight only after reaching the top rep range for all designated sets with clean form.
- " Maintain a 2-0-1-0 tempo (2s eccentric, 0s pause, 1s concentric, 0s hold) on foundational compound kinetic chains.
